

**LANTERNS
& LEDGERS**

A Guiding Light on Finance

BRAND IDENTITY KIT

Prepared for web development

Colours • Typography • Logo files • Usage rules

Contains embedded logo, badge and favicon files — see attachments panel

September 2026

Brand overview

Lanterns & Ledgers is Rhyannan Hall's fractional finance consultancy. The brand signals one thing before a word is read: finance that won't talk down to you. Warm, plain-spoken, illuminating.

Tagline / strapline

A Guiding Light on Finance

Brand personality

Warm • Trusted • Clear • Approachable • Professional

Logo concept

A hand-drawn Japanese paper lantern — warm light on something people find dark. The slightly imperfect line is deliberate; the mark should never be redrawn “clean”, stretched, rotated, or recoloured outside the palette below.

How to use this kit

This PDF is the single reference for building the Lanterns & Ledgers website: colour values, typography, and logo usage rules, plus the actual logo, badge and favicon image files embedded as attachments to this PDF (open the attachments/paperclip panel in Acrobat or Preview to save them out). If a PDF viewer doesn't expose attachments, ask Rhyannan to send the image files directly — everything here matches what's in the project's Brand & Design folder.

Colour palette

Two anchor colours carry the brand; the rest do quiet supporting work. Ember is seasoning — used sparingly, for calls to action only.

	Name	Hex	Role
	Lantern Orange	#F5A23C	Anchor — warmth, the glow. Fill/accent only, never text on light backgrounds.
	Ledger Navy	#1B3A5C	Anchor — trust. This is the body-text colour throughout.
	Warm Paper	#F4EDE2	Cream accent only — panels, table bands, callouts. Never a full-page background.
	Sage Slate	#6E7E72	Neutral — muted/secondary text, headings and buttons only.
	Ember	#C8553D	Accent — calls-to-action only, never used as a background.

Accessibility & usage rules

- Body copy is always Ledger Navy, on a white page — never a full cream fill for whole documents or screens.
- Warm Paper (cream) is for small areas only: table bands, side panels, callout boxes.
- Orange is a fill/accent colour — never set as text on a light background (fails contrast).
- Sage and Ember work for headings and buttons, never for body or small print.
- For sage-coloured small print, use the darkened tone #52615A to pass WCAG AA.
- Passes AA: Navy on Paper, Navy on White, Paper on Navy, Navy on Orange. Button/large text only: White on Ember, White on Sage.

Typography

All three typefaces are free via Google Fonts. Install the real font files for the live build — project documents have used Calibri as a placeholder only and it should not appear on the website.

Display serif — Fraunces

Used for headlines, the wordmark, and pull-quotes. Weight 600 for display use, 400 italic for accents (an italic tagline in Lantern Orange is the signature treatment). Never set body copy in this typeface, and never pair it with a second serif.

`fonts.google.com/specimen/Fraunces`

Body sans — Work Sans

Used everywhere else: website body copy, reports, decks, client documents. Weight 400 regular, 500 for emphasis.

`fonts.google.com/specimen/Work+Sans`

Reserve — Nunito Sans

Held in reserve for financial-education / workshop materials only — the softest landing for the most money-anxious audience. Not used on the core website.

`fonts.google.com/specimen/Nunito+Sans`

Quick reference

Typeface	Role	Weights used
Fraunces	Headlines, wordmark, pull-quotes	600, 400 italic
Work Sans	Body copy, UI, documents	400, 500
Nunito Sans	Financial-education materials only	400, 500

Logo system

A hand-drawn paper lantern mark in four lockups. Keep clear space around the mark of at least the height of the lantern's top loop. Flat only — no drop shadow, and never redrawn “clean”, stretched, rotated, or recoloured outside the palette.

Primary stacked lockup

Recommended default. Use for print documents and formal presentations.

Horizontal lockup

For website headers, mastheads and digital banners.

Badge / avatar

Small-use only — favicons, app icons, social avatars.

One-colour version

Navy-only, for simple print applications.

Recommended hierarchy

- Badge — favicons, app icons, and social avatars where space is limited.
- Horizontal lockup — website headers, email signatures, digital banners.
- Stacked lockup — formal documents and print presentations.
- Consistency builds trust: use the correct lockup for each context.

Assets for handover

The following source files are embedded as attachments to this PDF (paperclip/attachments panel in Acrobat, Preview, or most PDF readers). If your workflow needs them another way, ask Rhyannan to send them directly — these are the same files.

File	Format	Use
Lanterns_Ledgers_01_Primary_Stacked_Lockup.png	PNG	Print, formal documents
Lanterns_Ledgers_02_Horizontal_Lockup.png	PNG	Website header, digital banners
Lanterns_Ledgers_03_Badge_Avatar.png	PNG	Social avatars, app icons
Lanterns_Ledgers_04_One_Colour_Navy.png	PNG	Simple one-colour print use
Lanterns_Ledgers_05_Favicon_512.png	PNG	Favicon source (512×512)
Lanterns_Ledgers_favicon.ico	ICO	Browser tab favicon

Known gaps — flag, don't assume fixed

- A drop-shadow still appears on some older exports — use the files listed above, which are flat.
- The ampersand glyph in the wordmark is still being refined.
- Real font files (Fraunces, Work Sans) are not yet installed anywhere in the project — documents use Calibri as a stand-in. Install the actual Google Fonts for the site build.
- Final SVG exports are outstanding — current assets are PNG/ICO raster only. Ask Rhyannan if vector source is needed.
